

Jason Lim

Customer Solutions & AI Engineer | AI Adoption | Data-Driven Solutions
Sydney, Australia

limjason888@gmail.com | [LinkedIn](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Customer solutions professional with experience designing, deploying and demonstrating AI and data-driven solutions for enterprise and government clients.

Combining software engineering, consulting and analytical expertise, I specialise in translating complex business challenges into scalable technical solutions through customer discovery, workflow analysis, solution design and technical implementation.

Experienced collaborating with customers, engineers and product teams to deliver Proofs of Concepts, technical demonstrations and data-driven solutions that enable technology adoption and measurable business outcomes.

PROFESSIONAL EXPERIENCE

Actuarial Consultant | KPMG | Sydney

February 2026 – July 2026

Delivered analytical consulting solutions for insurance and financial services clients, translating complex datasets and business requirements into actionable insights.

- Analysed financial and operational data to support risk management, regulatory assessments and strategic decision-making.
- Developed insights across insurance domains including Marine Insurance and emerging operational risks.
- Communicated analytical findings and recommendations to stakeholders to support business decisions.

Customer Success and AI Engineer | IBM | Sydney

June 2025 – December 2025

Partnered with government customers to explore AI adoption opportunities, design technical solutions and deliver customer-focused outcomes.

- Facilitated discovery workshops to understand customer challenges, workflows and technology requirements.
- Developed Proofs of Concepts demonstrating cloud infrastructure automation and emerging technology capabilities.
- Created technical demonstrations and solution walkthroughs to support customer adoption.
- Collaborated with Client Engineers, Product Managers and technical specialists across global teams.

iOS/LLM Developer | OpenOnion | Sydney

November 2024 – December 2024

Developed AI-powered application features using Large Language Models.

- Designed conversational AI functionality to improve user interactions.
- Built scalable software components supporting AI-powered experiences.

Actuarial & Advanced Analytics Consultant | KPMG | Sydney

November 2024 – May 2025

Applied programming, analytics and actuarial modelling techniques to solve business problems.

- Developed Python and R-based analytical solutions to improve data workflows.
- Built predictive models transforming insurance data into actionable insights.
- Automated analytical processes and presented findings to consulting teams.

Co-founder | Sherlocked.ai | Sydney

September 2024 – November 2024

Led product strategy for a Federated Learning platform focused on improving financial inclusion.

- Translated user problems into product requirements and technical solutions.
- Explored customer needs, market opportunities and implementation strategies.
- Collaborated with technology leaders and startup mentors to validate product direction.

Technology Sales Consultant | Officeworks | Sydney

June 2018 – October 2023

Developed customer-facing technology consulting skills through direct engagement with consumers.

- Identified customer needs and recommended technology solutions.
- Translated technical concepts into clear business value.
- Built long-term customer relationships through trusted advice.

LEADERSHIP EXPERIENCE

Project Manager (Strategy Consulting) | Global Consulting Group | Sydney

March 2024 – June 2024

Led a consulting team delivering strategic recommendations for executive stakeholders.

- Managed project delivery and stakeholder engagement.
- Presented data-driven recommendations to leadership.

EDUCATION

University of New South Wales | Sydney

Bachelor of Computer Science & Bachelor of Actuarial Studies

Awards and achievements: Innovator Pro Winner (1st Place) • UNSW Employability Top Performer Award • Global Consulting Group Final Pitch (2nd Place) • Enactus Nationals (3rd Place) • Society of Actuaries Challenge Semi-finalist

SKILLS

Deployment & Customer Solutions

Customer Discovery • Requirements Gathering • Workflow Analysis • Solution Design • Technical Demonstrations • Proofs of Concept (PoCs) • User Enablement • Stakeholder Management • Executive Communication

Data & Analytics

Python • SQL • R • Pandas • Statistical Modelling • Data Analysis • Machine Learning • Data Pipelines • Predictive Analytics • Data Pipelines

AI & Software Engineering

Large Language Models • NLP • Computer Vision • TensorFlow • PyTorch • Hugging Face • OpenAI APIs • Software Development

Cloud & Infrastructure

OpenShift • Docker • Terraform • AWS • Azure • CI/CD • GitHub

PROJECTS

Meridian Operations – Operational Decision Platform

Technology: Next.js, React, Tailwind CSS, Supabase

Built an enterprise decision-support platform demonstrating how fragmented operational data can be transformed into actionable insights.

Marine Conservation System – Computer Vision

Technology: U-Net, Mask R-CNN, DeepLabV3, TensorFlow, OpenCV

Developed a computer vision system for marine conservation applications by applying deep learning techniques to image segmentation.

Sherlocked.ai – Federated Learning

Technology and skills: AWS, Federated Learning, Product Strategy, UI/UX, Pitching

Developed product strategy for a privacy-preserving AI platform addressing financial inclusion challenges.

PROFESSIONAL ENGAGEMENT

AI & Technology Community Contributor

- Interview founders, executives and AI leaders to analyse enterprise AI adoption, operational transformation and emerging technologies.
- Engage with startup ecosystems and AI communities to understand product strategy, go-to-market execution and real-world technology adoption.
- Support early-stage founders with customer discovery, product validation and go-to-market thinking for AI products.
